

ENVIRONMENTAL POLICY

FLSMIDTH gMAX SYSTEMS aims to contribute to environmental sustainability in areas where we may impact on environmental protection.

Being an engineering company and a products supplier with limited proprietary manufacturing, we strive to achieve our goal through continually reviewing our methods and by developing processes and services that help our customers in setting ambitious environmental standards in their production processes. We also have a duty to ensure legislative requirements relating to our scope of operations are met and client requirements are also considered. Our aim will always be to prevent pollution and minimise our impact on the environment.

The Environmental Policy is reflected by the following declaration of intent:

- Products and Processes will be designed so as to support the company image of being a responsible, reliable and professional supplier who meets the markets expectations and requirements for new sustainable technology.
- When developing processes, consideration must be given to the full life cycle and efforts made to reduce the consumption of energy and natural resources and, to the extent possible, to reduce environmental impact.
- Customers should be offered training with a view to ensure optimum usage of our products and services.
- Data will be collected to ascertain the direct environmental impact in the form of energy consumption and use such data as part of the basis for setting environmental goals and plans of actions for improvement.
